SUMMARY

Mortgage guaranty insurance provides protection to lenders against default by borrowers who initially have less than 20 percent equity interest in the mortgaged property. This form of insurance is designed to stimulate home ownership by allowing consumers with less than 20 percent down payment access to credit markets.

Because mortgage guaranty insurance can have large loss fluctuations, over the years and from state to state, the Missouri Department of Insurance has been collecting data on this business for 30 years (1970 - 1999) to monitor this market. Each year, the Department of Insurance directs mortgage guaranty writers in Missouri to file loss-ratios of their residential and commercial business for both Missouri and countrywide. This report compares the performance of these insurers in Missouri and countrywide.

In 1999, insurers writing residential guaranty insurance in Missouri reported a premium earned of \$50.7 million and losses totaling \$5.6 million in Missouri. The loss ratio is only 19 percent, or well below the usual levels for most lines of property and casualty insurance. For 30 years combined, the loss ratio is 26.7 percent in Missouri, but 59.3 percent countrywide.

The residential mortgage guaranty market in Missouri steadily has increased while the commercial mortgage guaranty market in Missouri has been decreasing since its peak in 1975. In 1999, 14 companies wrote residential mortgage guaranty insurance in Missouri. Commercial mortgage guaranty activity has all but ceased in Missouri, with only \$146 in 1999 earned premium and no losses. Commercial Loan Insurance Corporation is the only mortgage guaranty company writing commercial business and its premiums in Missouri are decreasing each year.

This report was compiled using information submitted by the insurance companies. While every effort is made to ensure accurate data, the accuracy of this report is dependent upon each company's data. The charts and graphs in Section I utilize data submitted by all mortgage guaranty insurers writing in Missouri for 1970 through 1999. Section II is based on companies actively writing in Missouri for calendar year 1999. Section III ranks mortgage guaranty insurers on their 1999 data by premium earned. Any questions regarding this report should be addressed to the Statistics Section, Missouri Department of Insurance, P.O. Box 690, Jefferson City, Missouri 65102-0690.

DEFINITION OF VARIABLES

Premium earned - The amount of premium that has been "used up" during the term of a policy. For example, if a one year policy has been in effect 6 months, half of the total premium has been earned.

Losses paid - The actual dollar amount paid out in losses for claims that have been filed.

Change in outstanding reserve - The outstanding reserve is an amount representing actual or potential liabilities kept by an insurer to cover debts on claims reported, but not yet paid. The amount reported is the increase or change from last year's reserve amount compared to this year.

Change in IBNR reserve - IBNR (incurred but not yet reported) reserve is a reserve set up to pay for losses that have already occurred, but have not yet been reported to the insurer. The amount reported is the increase or change from last year's reserve amount compared to this year.

Change in contingency reserve - This reserve is built up over a 10-year period by placing 50 percent of a company's net premium earned for unexpected contingencies or losses. The amount reported is the increase or change from last year's reserve amount compared to this year.

Loaded loss ratio - $\text{Losses Paid} + \text{Change in Outstanding Reserve} + \text{Change in IBNR Reserve} + \text{Change in Contingency Reserve}$ divided by Premium Earned.

True loss ratio - $\text{Losses Paid} + \text{Change in Outstanding Reserve} + \text{Change in IBNR Reserve}$ divided by Premium Earned.
